

Education

VIT-AP University

B.Tech in Computer Science and Engineering

2024 – 2028

CGPA: 9.19/10

Technical Skills

Languages: Java, Python, C, C++, SQL, PL/SQL, R

Machine Learning & Data Science: Machine Learning, Artificial Intelligence, Data Science, Data Analysis, Predictive Modeling, Feature Engineering, Classification, Regression, EDA, NumPy, Pandas, Scikit-learn, Matplotlib, Seaborn

Development & Tools: Flask, HTML, CSS, JavaScript, Git, GitHub, VS Code, Google Colab, Oracle SQL

Other: Qiskit, Quantum Computing, DSA, OOP, DBMS, Software Engineering, Flask, Streamlit, REST APIs, Figma, Canva

Experience

AI for Sustainability Intern — 1M1B

2024

- Developed an AI-based air and noise pollution monitoring system using Python, Flask, Streamlit, and Scikit-learn.
- Integrated 4 environmental parameters (PM2.5, CO, VOC, Noise) for pollution prediction and monitoring.
- Built machine learning models and deployed them through REST APIs with a live monitoring dashboard.

Projects

AI Study Buddy — Flask, Gemini AI, Python, HTML, CSS, Bootstrap, JavaScript

-Repo Link

- Developed an AI-powered learning assistant using Gemini AI for topic explanations, note summarization, quiz generation, and flashcard creation.
- Built a responsive full-stack application using Flask, HTML, CSS, Bootstrap, and JavaScript.
- Designed a scalable architecture for future educational AI enhancements.
- Applied prompt engineering techniques to improve response quality and learning effectiveness.

Classification of Personal Income — Python, Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, Logistic Regression, KNN

-Repo Link

- Built Logistic Regression and KNN models for income classification after preprocessing and feature engineering.
- Performed exploratory data analysis and evaluated models using accuracy, precision, recall, and confusion matrices.
- Conducted feature selection to improve model interpretability and predictive performance.

Predicting Price of Pre-Owned Cars — Pandas, NumPy, Scikit-learn, Linear Regression, Random Forest

-Repo Link

- Built an end-to-end used car price prediction model on 50,000 listings using supervised learning, applying feature engineering and one-hot encoding for categorical variables.
- Performed comprehensive data preprocessing and cleaning, including handling missing values, outlier removal, and exploratory data analysis to improve data quality.
- Trained and evaluated Linear Regression and Random Forest Regressor, with Random Forest achieving the best performance (R^2 0.85, RMSE 0.436), outperforming baseline models.

Certifications

Python for Data Science – NPTEL (Elite + Silver, 82%, Top 5%)

Oracle AI Foundations Associate

Quantum Algorithm Fundamentals (WISER)
